# HighReach Learning Scope & Sequence Chart Infants

Baby's first year is an exciting time with lots of exploration and discovery. Research shows that engaging infants in interactive experiences that involve sensory, motor, and social explorations build brain connections. Our infant caregivers can build these brain connections with the help of Bright Baby curriculum. Bright Baby activities engage and stimulate infants through social interactions: talking, playing, moving, singing, reading, and signing. Activities are integrated across all domains of infant development—physical, emotional, social, and cognitive—and develop a wide variety of skills including:

- \* Language acquisition
- \* Motor skills
- \* Sense of self
- \* Visual tracking
- \* Sensory awareness
- \* Self-help skills
